

AL-503 Welding wire lubricate

Product Description:

AL 503 is specialized in lubricating welding wire to decrease the friction when feed the wire to welding gun, which make wire moving smoothly. It is suitable to be coated by CWR electrostatic oiler.

Resistivity greater than 102 MQ, viscosity greater than 40cst.

- Good lubricity;
- welding smoke is small;
- The smoke produced by high temperature is harmless to human body;
- Suitable for electrostatic coating.

Professional for metal and aluminum alloy welding material surface lubrication and rust prevention.

- > Stainless steel welding wire
- > Aluminum alloy welding wire
- > Flux cored wire
- > copper-plated welding wire
