

Suzhou Newlead Augmented Intelligence Equipment Co.Ltd

NEWLEAD TRADE SUZHOU CO., LTD

Item	
Electrolytic Tin Extraction Machine	 
100T hydraulic press	  
Complete set of auxiliaries(fan, pipeline, pump, shovel, tin storage tank)	
Orbit crane(option)	
120kg Remelting furnace(option)	  

Suzhou Newlead Augmented Intelligence Equipment Co.Ltd

NEWLEAD TRADE SUZHOU CO., LTD

Overview of the Plan

The electrochemical tin removal bath is equipped with a special electrolyte. The metal frame filled with tin-coated copper wire serves as the anode, while the corrosion-resistant alloy plate acts as the cathode. After power is applied, the tin coating on the anode material undergoes an oxidation reaction, converting into tin ions which enter the electrolyte. Under the influence of the electric field, these tin ions are transferred to the cathode plate and undergo a reduction reaction to form metallic sponge tin.

Process flow
